

# Automatic Dimming Control (ADC-1) for the CGR-30x System

0710181

**Description:** The ADC-1 is a photo cell for auto dimming one or more CGR-30's.

**Installation:** The ADC-1 mounts in the aircraft instrument panel. The red wire connects to the 12 or 24 volt bus (via the CGR-30 breaker) and the white wire connects to pin 2 (back light control input) on the CGR-30.

**Setup:** Dimming levels are set at the factory, but they can be adjusted in the "Display & Voice Control" screen under the "System Config Screen Menu." Set Low Voltage = Dim and use black tape to simulate night operation (your finger will not work).
